- Designed to Activate Eyewashes
- Easy to Install
- Made from Corrosion-Resistant Materials
- Full, One-Year Warranty

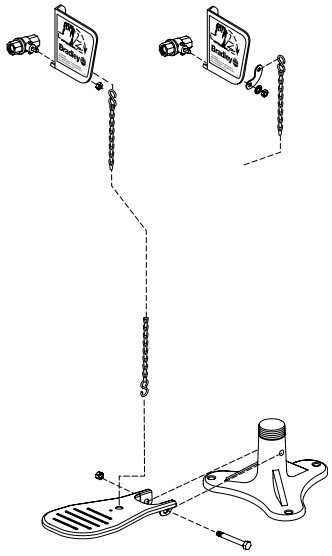

Specifications

Several foot treadle kits are available to meet your individual needs. They are shipped with all components necessary to fully install the product. When a fixture has been activated via the foot treadle, the hand valve must be used to manually reset the fixture after activation. Either the foot treadle or the eyewash handle can be used to activate the eyewash after the pedal is installed. The installation of this kit complements ANSI-compliant fixtures and does not compromise the current fixture's compliance.

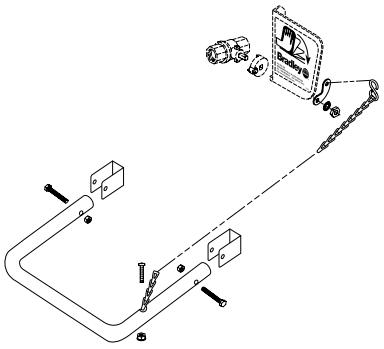

Standard Equipment

Some kits may differ slightly from others, but the majority include a foot treadle valve handle, an S-hook, a chain, the foot treadle, washers, screws, nuts and installation instructions. All components will be included to retrofit any Bradley compatible unit.

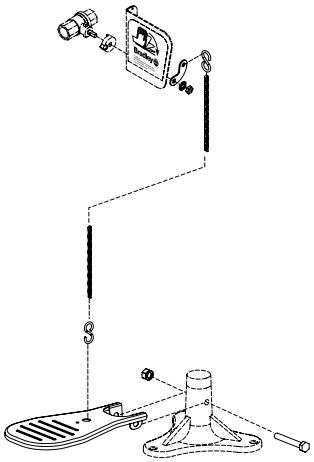

Model	Description
