

GLASSMAN
ITEM# GM2

Glassman Wedge

This Access Tools exclusive enables professionals to safely perform long reach tools on cars with frameless windows.

The Glassman™ wedge, designed for frameless windows, is an essential accessory for any professional. By using built in lexan sheets to create a sleeve, the wedge creates a place to insert your long reach tool.

By spreading the force of the tool during insertion over a wider surface of glass, there is a much lower chance of breaking the glass on delicate, frameless window vehicles.
