

Pro Wireless Programming Kit

PM05PKT

Application

The Pro Wireless Programming Kit is a powerful tool allowing you to further secure and customize each Pro Wireless installation by programming each Pro Wireless Com-Module. If you choose not to re-program your wireless modules they are still secure, but can be discovered by other default ProdataKey systems nearby. All Pro Wireless modules ship pre-configured with ProdataKey's encryption and security. A Pass phrase and Site name can be programmed to each Pro Wireless Com-Module to better secure the Pro Wireless network.

Specifications

Connections: Mini USB

Support OS: Windows / MAC / Linux

Dependencies: Java - Java is a free download and installs in minutes. www.java.com
CDM USB driver - The installer for this driver is included with the download of the Pro Wireless Config utility with Windows, Mac and Linux versions. Your computer will not provide a proper COM port for the device without this driver installed first.
