Slides bolts are a traditional way to hold shutters closed.

John Wright combines modern high-quality finishes with the strength and traditional look and feel of cast iron. Slide bolts are mounted on the inside of the shutters and positioned to be reached from inside the home through the window opening. They have two halves: the bolt and the catch. The bolt mounts to one shutter and the catch mounts to the other. The bolt engages the catch, locking the shutters closed and together.

- Sold in individually and include screws for mounting
- Includes anti-rattle springs for reduced noise in windy conditions
- Sliding bolt is easily field-removable to allow painting of custom colors
- Material: cast iron with steel screws
- Finish: WeatherWright™ coating process. This multi-step coating provides long life in outdoor environments while offering excellent value. It including both zinc electroplating and black-matte TGIC powder coating. Zinc plating provides far more protection than powder coating alone. The zinc layer is not only abrasion resistant but offers cathodic protection to small areas of powder coating that may be accidentally damaged during installation. Tested to withstand a minimum of 144 hours of salt spray with no visible red-rust corrosion. All fasteners and hardware meet this same standard.
- Warranty: 1-year replacement
- Optional and related items:
 - #88-550 or 88-449 Shutter Pull Rings are helpful to make using slide bolts much easier. Pull rings allow the shutters to be easily pulled and held closed so the slide bolt can be latched.

Installation

1. Close both shutters. Secure them closed with tape, a wood block, or have a helper hold them.
