# AD Series and CO Series

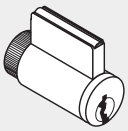

## Lever and cylinder compatibility

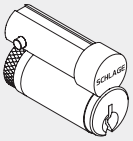

## Overview

AD Series and CO Series electronic locks come standard with the Schlage® 6-pin Everest 29™ S123 keyway and two patented keys. The Everest 29 keyway's new, patent-protected undercut design with protection through 2029, is available in open and restricted keyway families. Patented restricted keyways, such as the Everest 29 R &T families, deliver a higher level of security that require authorization to access blanks for duplication. With the inclusion of the Primus XP feature, multiple levels of security ensure that you get the right solution throughout your facility or campus. The new Everest 29 patent enables a key blank that is backwards compatible to legacy Everest keyways allowing Everest 29 keys to work with existing Everest systems aiding the key system migration process.

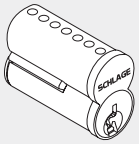

The AD Series and CO Series can also be ordered with other popular Schlage keyways or prepared to receive Falcon® 6 and 7 pin standard key-in-lever cylinders. Less cylinder options are available to provide compatibility with standard, FSIC or SFIC cylinders of other manufacturers including, Sargent,® Corbin Russwin,® Medeco® and Yale.®
