Miscellaneous information

Mounted lock samples
Individual mounted samples are available for all lock series. The samples are mounted on a mount block and are fully operative thus allowing demonstration of each functions' individual features. There is a nominal charge for the mount block. There is no charge for mounting of the hardware. See page 350 for mount selection.

Finishes Included: 605, 606, 613, 619, 622, 625, 630, and 643e. Contact your RSO representative for availability.

Competitors' keyways
A selection of standard keyways of other lock manufacturers is available as listed below (6-pin only). Consult options sections of each series for availability. (Not available in any mortise and rim cylinders, or factory master keyed.)
Furnished 0-Bitted unless otherwise specified. KD option is not available for locks containing 2 cylinders.

MANUFACTURER	KEYWAY	KEYWAY OPTIONS
Corbin Russwin®	60	0-Bitted, KD
	L4	0-Bitted, KA4
Russwin	D1	0-Bitted, KD
Sargent®	LA	0-Bitted, KD
Yale®	8 (Para)	0-Bitted, KD

Interchangeable cores
The "A" keyway is standard for IC products and will be supplied unless otherwise specified. A, B, C, D, DD, E, F, G, H, J, K, L, M, N, Q, R, TB, TD are equivalent to BEST® and Arrow® IC keyways of the same names. Consult Allegion Customer Service for restricted keyways not listed here. Conventional cylinders are not compatible with interchangeable core.

Competitors' cores
Falcon standard IC preps accept Arrow (including Flexcore), BEST (including PKS, Peaks® and CORMAX®), InstaKey®, Kaba Peaks®, Keymark™ and KSP cores. Other brands of interchangeable cores are compatible with T Series lockset. See page 33 for details.

Conventional cylinders
The "G" keyway is standard for conventional cylinder products and will be supplied unless otherwise specified. E, H, K, L, N and P are also available. Consult Allegion Safety Customer Service for restricted keyways and other keyways not listed here.
Note: Interchangeable core not compatible with conventional cylinders.

Restricted keyway policy
All keyways not listed in the above statements defined as standard keyways are considered RESTRICTED. Falcon requires a minimum cylinder order size to qualify for a defined geographic area restricted key system. A letter of authorization is required for the purchase of keys, locks or cylinders (to include plugs) for a restricted keyway. Contact 877-671-7011 for availability.

Finishes

Although we apply the finest available protective plating and/or enamel coating to the surface of our products, these finishes have limitations and in time may deteriorate either from exposure to weather, pollution, perspiration, extremes of climate, frequency of use or other factors. Deterioration of these finishes is, therefore, not a defect, but a normal process which is unavoidable. Our Company cannot accept responsibility for finish deterioration in these circumstances and therefore the finishes cannot be guaranteed. These products will not be refinished or replaced under our warranty should deterioration of finishes occur.

Some finishes are not suggested for areas that are subject to corrosive climate or chemical conditions. We recommend chrome plated or stainless steel finishes for these areas.

ANSI/BHMA FINISH	US NUMBER	DESCRIPTION
605[1]	US3	Bright Brass - Clear Coated
606	US4	Satin Brass - Clear Coated
613[2]	US10B	Satin Bronze; Dark Oxidized and Oil-Rubbed
619	US15	Satin Nickel
622	–	Matte Black
625	US26	Bright Chromium
626	US26D	Satin Chromium
630	US32D	Satin Stainless Steel
643e	US11	Aged Bronze

1. 605 finish is not recommended for corrosive climates.
2. Oil Rubbed Bronze (613) is considered a category "B" finish by ANSI/BHMA and will vary in color when applied to different alloys and forms of base material. 613 will also vary from production lot and additionally from one manufacturer to another. Oil Rubbed Bronze will wear off over time due to the "rubbed" finishing method that has no protective coating or plating.

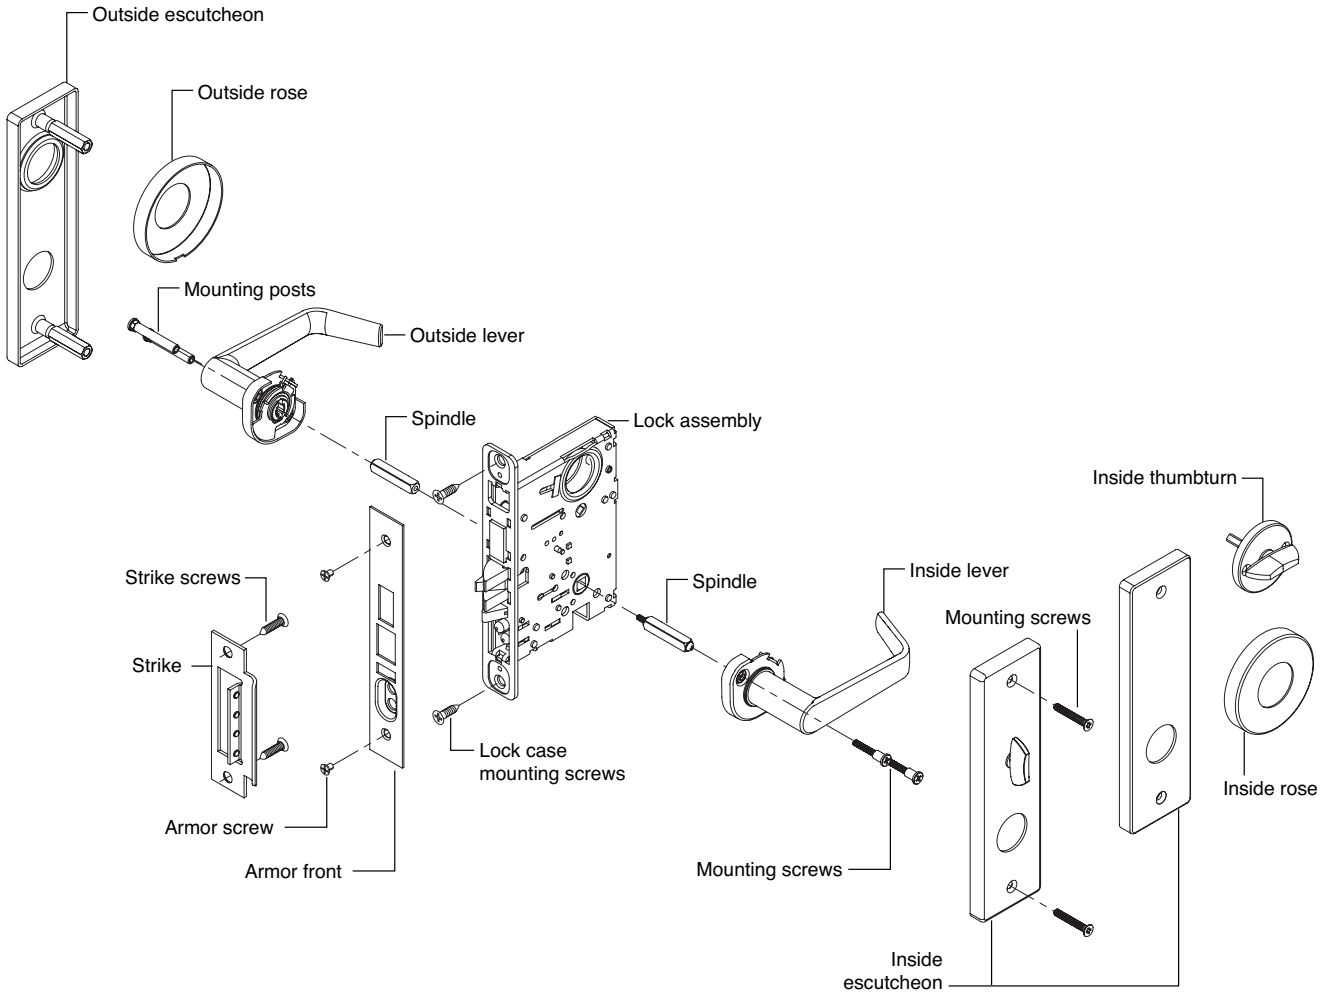

Please refer to price columns for each lock series for finish availability.

Markings (e.g., door number, stock reference numbers) on individual product cartons will be provided with no charge.

1. Keyed and temporary construction cores will be installed in locks and cylinders automatically unless otherwise specified on orders.
2. Construction cores for a given project are keyed alike to one of a limited number of combinations nationwide. Different Falcon projects in the same area using the same or different contractors may use the same key. Where a higher degree of security is desired, order a set of cores in 606 or 626 finish keyed alike to a random combination. Specify "KS1." Such cores are not returnable to Falcon but may be reused for other projects.
3. Temporary construction cores are an inexpensive alternative to interior keyed construction cores. This temporary is intended for use on interior door applications or where security on-site is not a concern.

TEMPORARY CONSTRUCTION CORE PROGRAM (DISPOSABLE)

Temporary construction cores may be ordered with interchangeable core locks and cylinders. These cores may also be ordered separately. Standard payment terms apply.

Features:

- Conveniently fits both 6-pin and 7-pin SFIC applications.
- No keys need to be issued.
- Disposable construction cores are not returnable.
- The disposable core is inserted in the lever or knob and is operated by a thumbturn, which retracts the latch bolt.

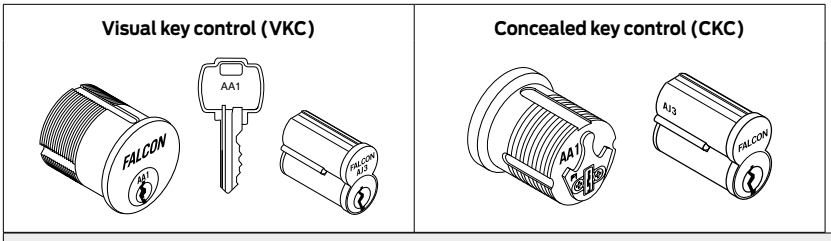

STAMPING

CYLINDER AND KEY STAMPING

With these options, keys and/or cylinders are stamped with the key symbol (code). This tells how the cylinder is keyed, eliminating trial and error. Lock mix-ups during installation or key mix-ups afterward are less likely to happen - and easier to straighten out if they do. For example, the symbol AA1 shown in the illustration identifies the lock to be operated by grand master key A, master key AA and change key AA1. Upon written authorization from the building owner to an authorized Falcon distributor, a bitting list can be furnished for each job to translate the symbols into key bittings. If a key is lost, a replacement key can be ordered by number from the Falcon distributor.

Visual key control (VKC) - For greater convenience
The key symbol is stamped on the plug face or other visible portion of the front of the cylinder. This makes identification fast and convenient. The disadvantage is that stolen or lost keys can be easily matched to the locks they operate. Also, restamping cylinders when they are rekeyed results in damage to the finish.

Concealed key control (CKC) - For greater security
For greater security, specify CKC on the cylinders. The key symbol is stamped in a concealed location, such as the rear of the cylinder or the side of an interchangeable core. It is not visible to the general occupants of the building but can be accessed by authorized personnel upon removal of the cylinder or core.

GENERAL EXIT DEVICE INFORMATION

(Specific to the Falcon 19, 24, and 25 Series exit devices)

All products listed meet ANSI A156.3 Grade 1 standard. Devices will be furnished for hollow metal doors 3'0" x 7'0" x 1-3/4" full flush, with 5/8" high frame stops unless specified otherwise.

DOOR WIDTHS

EXIT DEVICES for door widths exceeding 4'0" are custom applications. Specify the exact door width and consult factory for price and availability. For device widths on narrow stile aluminum and glass doors, consult factory.

DOOR THICKNESS

EXIT DEVICES are furnished at prices listed for door thicknesses of 1-3/4" with standard centerlines. Other door thicknesses and/or offset installations may require additional charges for the device, trim, control and/or strike. Consult factory.

DOOR HEIGHTS/DEVICE CENTERLINE

SURFACE and CONCEALED VERTICAL ROD DEVICES for heights over 7'0" up to 8'0", extension rods are furnished at no additional charge. For heights over 8'0" up to 10'0" extension rods are furnished at prices shown on specific device parts pages. For doors higher than 10'0" or when centerline is other than standard, specify exact height. Consult factory for price.

86 OR 161 DOOR PREPARATIONS

When devices will apply over a 86 or 161 door preparation, consult factory.

DEVICE MOUNTING SCREWS

Machine screws are furnished with Fire Exit Devices. Sheet metal screws are furnished with Panic Devices. Machine screws can be substituted at no additional charge, specify AMS.

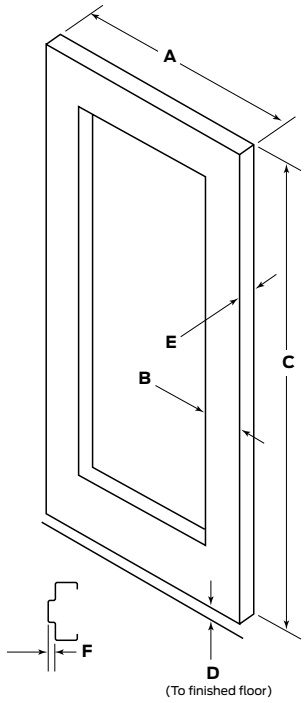

SUBSTITUTION OF OUTSIDE TRIM OR STRIKES

When other than standard is desired, deduct price of standard and add price of item used. Check catalog for compatibility. Lever trim is furnished standard Dane. Optional lever designs of Avalon, Quantum, and Sutro are available at no additional charge.

ELECTRIC ACCESSORIES

When specifying Electrical Products, consult catalog or factory to ensure all coordinating accessories have been considered. All electric devices must use respective power supply for warranty to apply.

FACTORS AFFECTING EXIT DEVICES

A Door width

Specify exact door width. This determines what size device is supplied. If door width not specified, 3' is furnished standard.

B Stile width

Determines which series can be used because of the dimension of the active or inactive case. In conjunction with the door width, the width of the device is also affected.

C Door height

Rod lengths and extension rod requirements for surface vertical or concealed vertical rod devices are determined by height.

D Undercut

Bottom rods and bottom latches or bolts for vertical rod applications are affected by the distance between the bottom of the door and the surface to which the strike will apply; 1/4" minimum, 3/4" maximum.

E Thickness

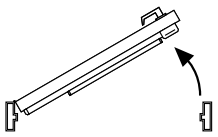

When trim is used with a device it is affected by thickness as is the length of fasteners and cylinders.

F Stop height

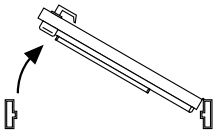

The type of strike and affect on backsets is determined by the stop (5/8" standard)

Double egress - Double door

Glass bead

In the case of touch bar devices, Series 19, 24 and 25, glazing bead or trim can interfere with the device requiring shim kits with modified trim and/or device.

Fire labels

As a component of a fire door assembly, exit devices must meet special requirements.

Other

Factors such as transom panels, sill conditions and astragals can affect exit device selection.

Pairs

When devices will occur on paired door leaves, order them together.

Materials

Unusual door or frame materials can affect device selection such as channel iron frames, blade stop frames, hollow core doors and mineral core doors.
